

Personal Portfolio Website

1. Project Description

A responsive personal portfolio website showcasing skills, projects, and contact information. Built with HTML5, CSS3, and JavaScript using modern responsive design principles.

The website is designed to work on desktop, tablet, and mobile devices.

2. Project Objectives

The main objectives of this project are:

- To create a professional personal portfolio website.
 - To practice semantic HTML5.
 - To use CSS Flexbox and Grid for layouts.
 - To implement responsive design using media queries.
 - To create an accessible navigation and contact form.
 - To practice basic JavaScript interactivity.
-

3. Features

- Responsive design for mobile, tablet, and desktop
- Semantic HTML5 structure
- CSS Grid and Flexbox layouts
- Responsive navigation with mobile menu
- Accessible navigation
- Contact form with basic validation
- Hover effects and CSS transitions
- Project showcase section
- Skills section
- About section

4. Technologies Used

- HTML5
 - CSS3
 - JavaScript
 - Git
 - GitHub
 - Visual Studio Code
-

5. Project Structure

Portfolio-week1/

```
|  
├── index.html  
├── css/  
|   ├── style.css  
|   ├── responsive.css  
|   └── variables.css  
├── js/  
|   └── navigation.js  
├── images/  
├── screenshots/  
├── README.md  
└── .gitignore
```

File Explanation

index.html

Contains the main semantic structure of the portfolio.

style.css

Contains the main website styling.

responsive.css

Contains media queries for responsive layouts.

variables.css

Contains reusable CSS variables such as colors, shadows and spacing.

navigation.js

Handles the mobile hamburger navigation.

6. Setup Instructions

Requirements

- Visual Studio Code
- Modern web browser
- Live Server extension (recommended)

Steps

1. Clone or download the GitHub repository.
 2. Open the Portfolio-week1 folder in VS Code.
 3. Open index.html.
 4. Run the project using Live Server.
 5. Open the website in a browser.
-

7. Technical Requirements Implementation

HTML5 Semantic Elements

The website uses semantic HTML5 elements including:

- <header>
- <nav>
- <main>

- <section>
- <article>
- <footer>

External CSS

CSS is organized into separate files:

- style.css
- responsive.css
- variables.css

Flexbox

Flexbox is used for navigation, alignment and button layouts.

CSS Grid

CSS Grid is used for the skills and project card layouts.

Responsive Design

Media queries are used to adjust the layout for:

- Desktop
- Tablet
- Mobile

Accessibility

Accessibility features include:

- Image alt attributes
- Form labels
- ARIA attributes
- Accessible navigation
- Focus states for form inputs

JavaScript

JavaScript provides basic interactivity for the mobile navigation menu.

8. Contact Form

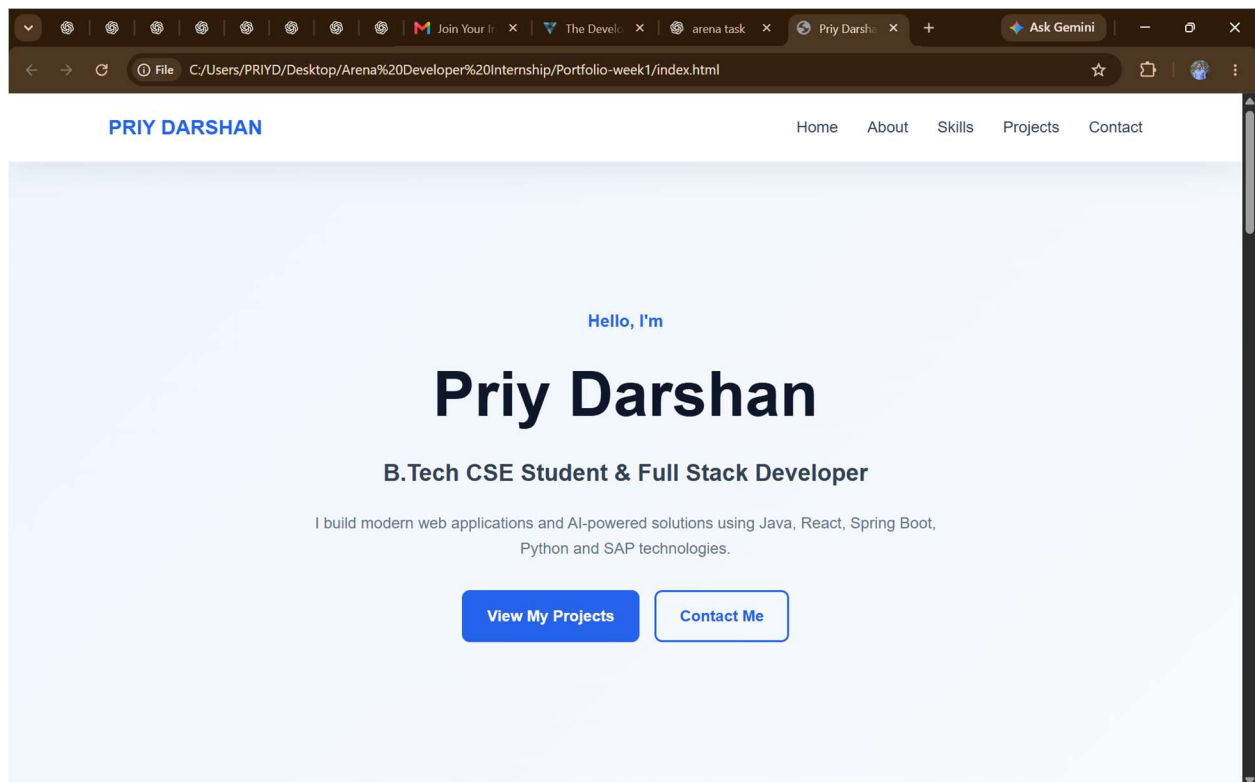

The contact form contains:

- Name
- Email
- Subject
- Message

HTML5 validation is used for required fields and email validation.

10. Testing

The website was tested for:

Test	Result
Desktop responsiveness	Passed
Tablet responsiveness	Passed
Mobile responsiveness	Passed
Navigation links	Passed
Mobile hamburger menu	Passed
Contact form validation	Passed
Image accessibility	Passed

11. Conclusion

The project successfully demonstrates the fundamentals of HTML5, CSS3 and JavaScript. The portfolio is responsive, accessible and organized according to modern web development practices.
